About Me

A Supply Chain professional (SCM) with a bachelor's degree in electrical engineering and a solid work experience in implementing warehouse operations and logistics support.

I have consolidated my career in different industries such as automobile, aircraft and renewable energies, what has allowed me to develop excellent communication and troubleshooting skills in a cross-disciplinary work environment. I also possess a proven track record in the logistical area of large projects like the regularization of depots for Spanish Air Force (SPAF) and construction of the solar thermal power plants: ASTE-1B, Andasol-1 & 2, Manchasol-1 & 2 and Ibersol Puertollano.

I am a person with a good sense of organization, quick to pick up new abilities and able to work in a multicultural team.
